EDUCATION

Bachelor of Technology, Vishwakarma Institute of Technology
CGPA : 8.55

2021 - 2025

EXPERIENCE

Software Development Engineer

July 2025 - Present

Maxim AI

Bengaluru, Karnataka

- Built a highly scalable system that parses and manipulates SQL from **3 production databases**, ClickHouse (millions of LLM trace logs), PostgreSQL with **pgvector** (semantic clustering and embeddings) and MySQL (evaluation metrics) while filtering data on millions of logs maintaining memory constraints on nodejs backend.
- Designed and built an **asynchronous synthetic data generation pipeline** integrating the frontend, **GCP Pub/Sub**, and streaming service where LLM-generated rows are streamed **through SSE** and are persisted incrementally to **MySQL** by background workers to prevent data loss; implemented real-time progress updates (**WebSockets**), job polling via **RTK Query**, and resilient orchestration.
- Designed and implemented the **end-to-end simulation architecture** from SDK and Go workers microservices.
- Developed multiple **AI demo agents** with integrated observability including code generation, transcript scribing, document parsing, and NL2SQL systems.
- Re-architected log repository state management handling **17+ query state variables**, replacing a **Redux + localStorage + URL** multi-source system with a **single URL-driven model**, eliminating race conditions and enabling shareable views.
- Contributed to platform UX including onboarding flows, samples, integration, and dataset creation.

Junior Backend Engineer

Feb 2025 – Jul 2025

Onpoint Software Services

Remote, India

- Developed backend services using **NestJS** for a **Smart Property Management System (SPMS)** deployed for the Shirol District administration.
- Improved database performance using pagination and indexing strategies on **PostgreSQL EDB** managing **10,000+ property** records.
- Implemented **logging and monitoring pipelines** integrated with **Grafana**.
- Created standardized API documentation using **Swagger** and **OpenAPI**.

PROJECTS

Web-Craft: Multi-Tenant SaaS Website Builder (2024)

Next.js, PostgreSQL, Razorpay

- Built a multi-tenant SaaS platform using Next.js with PostgreSQL as the primary database.
- Implemented role-based access control (RBAC) and Clerk OAuth for secure authentication.
- Integrated Razorpay APIs as payment gateway for smooth subscription payments.
- Designed customizable templates and drag-and-drop UI components for dynamic product creation.

RT-Chat: Real-Time Chat Platform

WebRTC, Node.js, Redis

- Built a real-time chat platform using **WebRTC peer-to-peer communication** with a Node.js signaling server to establish connections between clients.
- Implemented **Redis-backed presence tracking and message broadcasting** to efficiently manage concurrent users across chat rooms.
- Designed backend APIs for session management, authentication, and chat room coordination.
- Added automated tests to ensure reliable connection handling and message delivery across multiple peers.

Mmemo: AI agent platform (2026)

Go, Next.js, SQL, Bifrost

- Contributed in building an AI agent platform where agents are persistent entities — each with memory, personality, model config, tools, and budget controls.
- Integrated across Discord, WhatsApp, Slack, and web with shared memory and channel-isolated threads.
- Built with Bifrost for governance, observability, and provider routing.

TECHNICAL SKILLS

Languages TypeScript, Python, Go, SQL

Backend Node.js, NestJS, Express.js, REST APIs, Microservices

Frontend React.js, Next.js, Redux, Tailwind CSS

Databases PostgreSQL, MySQL, Clickhouse, Firestore, Redis, Prisma, Drizzle

DevOps Docker, Kubernetes, CI/CD (GitHub Actions), Cloud Computing
